

JOSE LUIS VILLESTAR

# About me

I'm a student from lyceum manila I enjoy doing posters, graphic designs, Digital drawing, video editing, and a bit of photography and animation, Making this things makes me happy since I always love to design and learn new things about design. It's a nice feeling when I see the conclusion of my design is good.

### THE ORDINARY

**NIACINAMIDE 10% + ZINC 1%**

One of the best products from The Ordinary is their Niacinamide 10% + Zinc 1% serum. This serum has gained popularity for its effectiveness in addressing a variety of skin concerns.

**USES:**  
The primary use of Niacinamide 10% + Zinc 1% is to target blemishes and congestion in the skin. It is particularly beneficial for those who experience frequent breakouts or have oily skin. Additionally, this serum helps improve the appearance of enlarged pores and uneven skin tone.

**PROPERTIES:**  
• Niacinamide (Vitamin B3): Known for its anti-inflammatory properties, niacinamide helps reduce the appearance of blemishes and congestion. It also strengthens the skin's barrier, reducing moisture loss and protecting against pollutants.

• Zinc PCA: Zinc plays a role in controlling sebum production, which can help reduce oiliness. It also has antioxidant properties, which aid in skin repair and protection against environmental damage.

**MODE OF ACTION:**  
Niacinamide works by inhibiting the transfer of melanosomes from melanocytes to keratinocytes, which helps in reducing hyperpigmentation and evening out skin tone. It also increases the production of ceramides, enhancing the skin's barrier function. Zinc, on the other hand, helps regulate oil production and has antimicrobial properties, making it effective in reducing acne.

**PRECAUTIONS:**  
• Patch Test: As with any new skincare product, it is advisable to perform a patch test before full application to ensure there is no adverse reaction.

• Avoid Conflicts: Niacinamide can be used with most products, but it is recommended to avoid using it in the same routine as vitamin C, as it may reduce the effectiveness of both ingredients.

• Sun Protection: While niacinamide does not increase sensitivity to sunlight, it's always a good practice to use sun protection as part of your skincare routine.
